REXPN TEST Nurse02, an REx-PN examination applicant for College of Nurses of Ontario, **HAS NOT PASSED** the Regulatory Exam – Practical Nurse.

The REx-PN® examination is a Computerized Adaptive Test (CAT) that administers test items until a precise pass or fail decision can be made. On the REx-PN examination, no candidate is administered fewer than 90 items or more than 150 items. You answered **90** items. Only candidates whose performance was close to the passing standard, either just above it or just below it, had to answer the maximum number of 150 items. Fewer items were required for a precise pass-fail decision to be made for those candidates whose performance was much lower than the passing standard.

Pass-fail decisions are based upon the candidate's performance across the entire examination. To pass the REx-PN examination, a candidate must perform **ABOVE** the passing standard. Candidates fail if they only meet the passing standard or are below it. The purpose of this Candidate Performance Report is to give you information about your performance on **10/29/21**. The back of this form gives you more information about your performance on the specific content areas of the examination.

- Above the passing standard
- Near the passing standard
- Below the Passing Standard

These descriptions are designed to help you understand the strengths and weaknesses of your performance. Use this information to help guide your study before you take this test again. Please note that "near the passing standard" does not imply a satisfactory performance on the content area. Also, you cannot add your performance in the content areas (i.e. above, near, or below the passing standard) to validate the pass-fail decision. **If your ability is above the passing standard in a given content area, you should still study that area to maintain your proficiency.**
